HARD SKILLS

JavaScript & TypeScript (ES6+) | Node.js | Go | React / Next.js | HTML5 / CSS3 | Tailwind CSS | Git | Express.js / Hono | PostgreSQL / MongoDB / Redis | Docker | Driving License (Category B)

SOFT SKILLS

Responsibility | Communication | Independence | Analytical Thinking | Problem Solving

LANGUAGES

- Polish (Native)
- English (C1)

INTERESTS

Selfhosting, New Technologies, History, Karaoke, Skiing, Video Games, Animals

ABOUT ME

Software engineer specializing in modern web applications, backend services, and selfhosted server environments. I primarily work with TypeScript and Go, designing efficient, scalable, and maintainable solutions. I focus on high code quality, thoughtful architecture, and effective problem solving.

EDUCATION

Lublin University of Technology — **February 2026 - Present**
Computer Science
Degree: Master of Engineering

Lublin University of Technology — **October 2022 - January 2026**
Computer Science | Software Engineering
Degree: Bachelor of Engineering
Thesis: Web application for sharing code as a link and in real-time

MAIN PROJECT

DoggoPaste

github.com/PoProstuWitold/doggopaste

Node.js | TypeScript | Hono | Next.js | PostgreSQL | WebSockets

Problem: Existing solutions usually offered either simple code sharing via links or collaborative editing. There was no modern platform combining both approaches in one intuitive tool.

Solution: As part of a two-person team, I co-developed DoggoPaste, a web application enabling fast code sharing, real-time collaborative editing, private and public pastes, selected client-side encryption, and content management through an admin panel.

Result: Delivered a comprehensive engineering thesis project awarded the highest possible grade (5.0/5.0) with distinction.

The application was designed as a real product ready for independent deployment, demonstrating my teamwork, software engineering, and end-to-end product delivery skills.

OTHER PROJECTS

Homeserver

PROJECT

github.com/PoProstuWitold/homeserver

Linux | Docker | Networking | Cloudflare | Port Forwarding | VPN

Problem: Building a personal home server environment is often complex, fragmented across many guides, and requires knowledge of networking, security, and service deployment.

Solution: I independently created extensive documentation and a working home server environment based on Linux, Docker, reverse proxy, VPN, and secure service publishing through Port Forwarding and Cloudflare Tunnels. The project includes practical deployments, automation, and infrastructure maintenance.

Result: Built a complete, actively used server environment and a practical guide for people starting with selfhosting. The project demonstrated my skills in system administration, networking, and production-grade service deployment.

Nuntius Feed

PROJECT

github.com/PoProstuWitold/nuntius-feed

Node.js | TypeScript | Hono | React | MongoDB | RSS

Problem: Many RSS readers are outdated, unintuitive, or lack convenient subscription management and a modern user interface.

Solution: I independently designed a web application for subscribing to and reading RSS and Atom feeds. The system supports source management, favorite articles, OPML import and export, user authentication, and automatic background refresh.

Result: Delivered a modern content aggregator built as a full web application with separate frontend and backend layers. The project demonstrated my skills in scalable application development, business logic design, authentication, and data management.

CERTIFICATES

Certificate in Advanced English (C1) — **December 19, 2023**

English Language Certification
