Bachelor's degree in Computer Science (Engineering)

Lublin University of Technology
2022 - now

ABOUT ME

As a self-taught programmer who aims to become a full-stack developer in the future, I'm constantly expanding my skills in both backend and frontend development to understand both domains and create complete, secure, and user-friendly applications using technologies such as *Node.js* and *React*.

PROJECTS

My projects that I'm most proud of.

nest-next-boilerplate

A fullstack application template for creating others. It features a chat system, local as well as Google and Facebook authorization, account management, password reset, and many other functionalities.

reddit-clone

A simplified clone of the popular website Reddit. It enables the creation of subreddits, posts, comments, and upvoting/downvoting of posts and comments.

Homster

An online game library modeled after Steam. It allows users to create accounts, studios, games, tags, and categories, as well as purchase games and add them to their wishlists. Built using GraphQL.

Sayuna

An easily extensible Discord bot that offers functionalities such as music management, administration, as well as entertainment and AI-related commands.

HOBBIES

My hobbies include: programming, learning about new technologies and technical advancements, skiing, history, video games, cooking, and spending time with animals.
